

IDEATION PHASE

BRAINSTORMING & IDEATION PHASE

DATE	29 SEPTEMBER 2026
TEAM ID	6ab22272e880316a482c6321
PROJECT NAME	IMPLEMENT CLIENT SCRIPT & UI POLICY (INCIDENT)
MAXIMUM MARKS	4 MARKS

Brainstorm & Idea Prioritization

In this phase, discussions were held to identify an effective way to improve the Incident form using Client Scripts and UI Policies in ServiceNow. The main focus was to make the form user-friendly, reduce incorrect data entry, and dynamically control form fields based on user actions.

1. Core Problems Identified:

- Incident forms contain multiple fields, and users may enter incomplete or incorrect information.**
- Certain fields need to be mandatory only for specific situations, while some fields are not relevant for every incident.**
- Users may have difficulty understanding which fields need to be completed based on the selected incident details.**
- Manually validating and controlling fields can lead to inconsistent incident data.**

2. Proposed Solution:

- Conceptualized the use of Client Scripts to perform client-side validations and dynamically control incident form behavior.**
- Implemented UI Policies to make fields mandatory, visible, or read-only based on specific conditions.**

- **When users select or change values in the Incident form, the system will automatically apply the required field behavior without requiring manual intervention.**

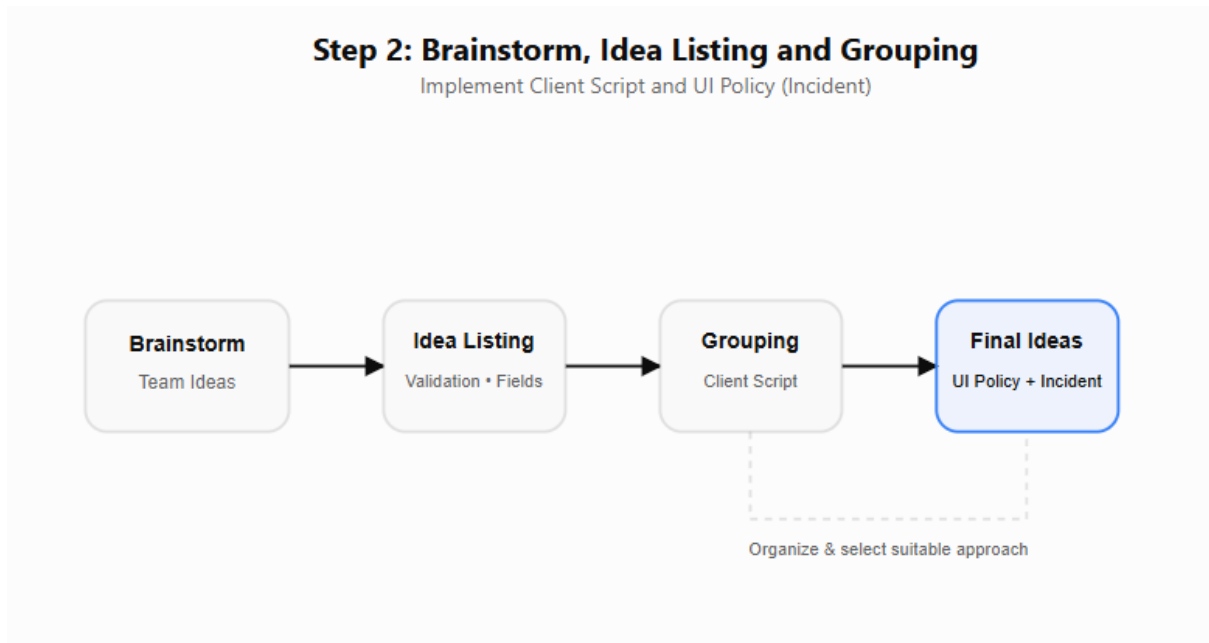

3. Key Objectives & Scope:

- **Dynamic Form Behavior:** To automatically change field properties based on user selections.
- **Data Validation:** To prevent incorrect or incomplete information from being submitted.
- **User-Friendly Interface:** To display only relevant fields and guide users while creating or updating incidents.
- **Reduced Manual Effort:** To minimize the need for users or IT staff to manually verify form information.
- **No-Code/Low-Code Configuration:** To use UI Policies wherever possible and Client Scripts only when custom client-side logic is required.

Step 1: Team Gathering, Collaboration

Step 2: Brainstorm, Idea Listing and Grouping

Step 3: Idea Prioritization
