

Project Design Phase-II
Technology Stack (Architecture & Stack)

DATE	28 SEPTEMBER 2026
TEAM ID	6ab22272e880316a482c6321
PROJECT NAME	IMPLEMENT CLIENT SCRIPT & UI POLICY (INCIDENT)
MAXIMUM MARKS	4 MARKS

Technical Architecture:

The Auto Ticket Classification system is designed using the ServiceNow platform and Flow Designer to automate the categorization of incoming tickets. The architecture consists of the following components.

Application Characteristics – Auto Ticket Classification using Flow Designer

S.No	Characteristics	Description	Technology
1	Open-Source Frameworks	ServiceNow platform used for workflow automation and ticket management.	ServiceNow Flow Designer
2	Security Implementations	Role-based access control (RBAC), user authentication, data encryption, and audit logging are implemented to ensure secure ticket handling.	ACLs, RBAC, HTTPS, Encryption
3	Scalable Architecture	The application can handle a large number of incident tickets and automate classification through configurable workflows and business rules.	ServiceNow Cloud Platform, Flow Designer

4	Availability	The system provides high availability through cloud-based infrastructure, ensuring continuous access to ticket management services.	ServiceNow SaaS Platform
5	Workflow Automation	Automatically classifies tickets based on predefined conditions and routes them to the appropriate support teams.	Flow Designer, Business Rules
6	Integration Support	Supports integration with email, notifications, and other ITSM modules for seamless ticket processing.	REST APIs, Email Notifications
7	Reporting & Monitoring	Generates reports and dashboards to monitor ticket trends, classification accuracy, and resolution performance.	ServiceNow Reports & Dashboards
8	Database Management	Stores incident records, workflow data, and classification results for tracking and auditing purposes.	ServiceNow Tables (Incident Table)
