

Code-Layout, Readability and Reusability

Date	28 September 2026
Team ID	6ab22272e880316a482c6321
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability (Flow Configuration & Structure):

This document evaluates the quality of the ServiceNow automation structure in terms of its modular layout, readability, and reusability.

- Modular Workflow Design (Code-Layout):** Instead of traditional script-heavy coding, the project utilizes ServiceNow’s visual **Flow Designer** framework. The automation is organized into clean, structured components—such as Trigger Conditions, If/Else-If branching logic, and Action blocks—ensuring that the workflow is logical, easy to navigate, and highly maintainable.
- Readability & Naming Conventions:** Proper naming conventions are applied across all custom elements, including custom tables (`u_incident_workflow`), field configurations, and conditional branches. Clear labeling of keywords (e.g., *Wi-Fi*, *Projector*, *Password*, *Slow*) and intuitive step descriptions make the workflow completely transparent and readable for any administrator or evaluator reviewing the system.
- Reusability & Extensibility:** The modular design of the conditional blocks ensures that the project is future-ready. New categories, subcategories, or department-specific keywords (such as printing or software issues) can be easily plugged into the existing Flow without rewriting or disrupting the core architecture, ensuring long-term scalability and smooth extension in future development.

1. Code Layout Checklist

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1.	Consistent Indentation	Uniform spacing/tabs used throughout the configuration	Yes	Structured cleanly within ServiceNow Flow Designer visual layout.
2.	Proper File Structure	Files and folders are logically organized	Yes	Organized using custom tables (<code>u_incident_workflow</code>) and application scopes.
3.	Meaningful Variable Names	Variables reflect their purpose clearly	Yes	Field names and data pills (e.g., Short Description, Category) are explicitly named.

4.	Function / Method Names	Functions are descriptively named	Yes	Flow actions and branch conditions are clearly labeled (e.g., <i>Auto Classify School IT Tickets</i>).
5.	Code Comments	Inline and block comments explain logic	Yes	Flow logic notes and annotation blocks describe the If/Else-If branching rules.
6.	Modular Design	Code is split into reusable functions/modules	Yes	Divided into modular trigger conditions, condition blocks, and email action modules.
7.	No Redundant Code	Duplicate or unused code is removed	Yes	Streamlined flow paths with no redundant branching or dead actions.
8.	Error Handling	Exceptions and errors are handled gracefully	Partial	Handled through standard ServiceNow system error logs and default fallback routes.

2. Reusable Components / Modules

S.No	Component / Module Name	Language / Technology	Where Reused	Reusability Level (High / Medium / Low)
1.	Incident Workflow Table (u_incident_workflow)	ServiceNow Platform / Dictionary	Reused across all school IT helpdesk ticket submissions and tracking.	High
2.	Keyword Condition Evaluator	ServiceNow Flow Designer (If/Else-If)	Reused to scan multiple incoming tickets for Wi-Fi, Projector, and Password keywords.	High
3.	Automated Email Notification Action	ServiceNow	Reused across	High

		Notification Engine	different ticket categories to send instant updates to callers.	
4.	Dynamic Subcategory Choice List	ServiceNow Dictionary Overrides / Dependent Fields	Reused on incident forms to filter options based on selected categories.	Medium
5.	System Event & Audit Logger	ServiceNow System Logs	Reused for tracking flow execution paths and debugging automation performance.	Medium

3. Overall Code Quality Assessment

Aspect	Rating (1-5)	Comments
Code Layout & Structure	5/5	Excellent utilization of ServiceNow's visual Flow Designer framework instead of complex manual scripting.
Readability	5/5	Highly readable flow nodes, descriptive condition names, and clear naming conventions.
Reusability	4/5	Modular workflow design allows easy extension to new departments, categories, or keywords.
Documentation / Comments	4/5	Well-documented flow steps, action descriptions, and system configuration notes.
Overall Score	4.5 / 5	Represents a robust, clean, and highly efficient no-code automation implementation.
